

## Card with hexagon art made from linen cardstock

This DIY is all about hexagons. And about the Florence linen cardstock from which we punch out these geometric shapes. Dive into various colours and sizes to create the most stunning combinations. The outcome? A cheerful, graphic card adorned with coloured hexagons that will surely please the recipient!

Utilize the hexagon craft punch set and select the second and third largest punches. Grab the Florence linen cardstock multipack. Punch out 20 hexagons measuring 22 x 25 mm from 20 sheets, and 20 hexagons measuring 33 x 38 mm from the other 20 sheets.

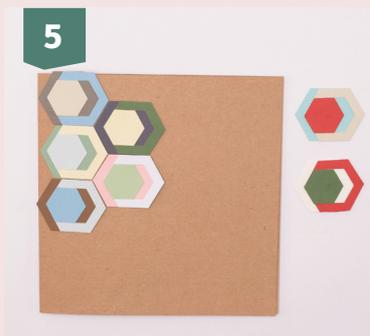

Now, take the 20 sheets where the smaller hexagons were punched out. Grab the larger punch and align it precisely over a smaller cut-out. By punching in this manner, a hexagon border is formed.

You now have 20 small hexagons, 20 large hexagons, and 20 large hexagons with a border.

Create various colour combinations by taking one of each shape and stacking them as shown in the above photo.

Take a double card in kraft colour and start placing the layered hexagons in the corner. Glue them together in rows of 5, with one of them sticking out halfway.

Use a guillotine cutter to trim it into a straight card.

Now, punch out a hexagon from two colours of paper using the largest punch from the set (44 x 51 mm).

Glue the hexagons together and write a fun message on them. Attach them to the card with foam tape.
