

Making a kite with our craft kit

Vaessen Creative's craft kits are perfect for school projects, home activities, children's parties, workshops, therapy, and much more! In this DIY project, we'll be making a kite using foam lollipop sticks.

Will you join us?

Start by laying out the frame of the kite using foam lollipop sticks. Begin with one horizontal stick, then use four more sticks to form a diamond shape.

Take a split pin and push it through the end of the horizontal stick. Attach two sticks to the split pin and bend them towards each other.

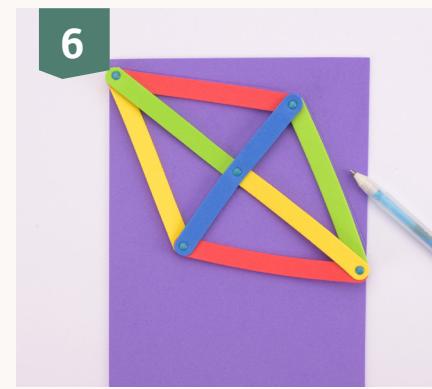

Repeat this on the other side of the horizontal stick. Bend the ends of both split pins once you are satisfied with the diamond shape.

Use two more foam lollipop sticks for the vertical stick. Attach them to the ends of the diamond shape with a split pin. Then, bring them together in the middle of the horizontal stick.

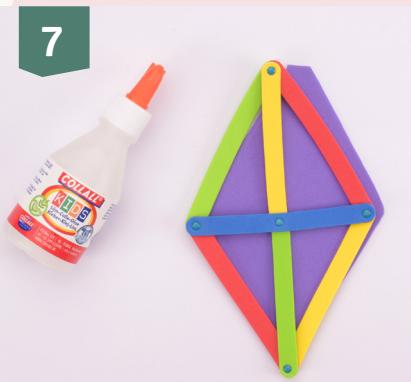

Secure everything with another split pin and trim off any excess ends of the sticks.

Draw the shape of the kite on a sheet of foam and cut it out.

7

Apply craft glue to the back of the frame and stick it onto the cut-out foam shape.

8

Decorate the kite with eyes and sequins as desired.

9

Take two pipe cleaners and twist them around a pen. The thinner the pen, the curlier the stems will be.

10

Finally, glue the pipe cleaners to the back of the kite, and your kite is ready to fly!
