

## Craft a Cute Chick with Aluminum Wire

Craft a cute little chick from foam and aluminium wire — a simple, creative project to make for Easter and brighten up your home.

**1**  
Spray the foam balls yellow with spray paint for a smooth finish, or paint them with acrylic paint and a brush. Stick the balls onto skewers to keep your hands clean and place them in a glass to dry.

**2**  
Cut two 10 cm pieces of aluminium wire and bend them into the shape of chick feet. Make two, one in mirror image, to create a left and right foot.

**3**  
Cut another two 10 cm pieces of wire and fold them a third of the way along to make wings. For the beak, use a 5 cm piece and bend it into a V-shape.

**4**  
Assemble the chick by attaching the head to the body with a small piece of wire.

**5**  
Then, insert the feet, wings, and beak into the chick.

**6**  
Finally, add the eyes, and your chick is ready!
