

## Paper Christmas Tree Ornament

Bring the festive spirit into your home with this fun Christmas DIY! Learn how to make your own Christmas trees using stamps and a die-cutting machine. Perfect as hanging decorations or for the Christmas tree.

Use the Cut Easy Mini die-cutting machine to cut out 5 Christmas trees from Florence cardstock paper in the 'pine' colour. We recommend the dies from the 'Christmas Die and Stamp Shifters Tree set' by We R Makers.

Score the trees from the top to the trunk using the scoring function on the paper cutter.

Stamp the trees using the corresponding stamps.

Infuse colour into the trees by colouring the accents with markers or gel pens.

Cut a ribbon approximately 9 inches long and tie a knot in it.

Apply double-sided tape along the edges of the trees. Stick the ribbon in place with the knot just over the edge and the loop facing upward. Then, adhere one half of a tree with the back against the back of another tree's half. Continue this process until you've glued together all five Christmas trees into a 3D Christmas tree.
