

Crafting a Christmas tree from pipe cleaners

Create a charming mini Christmas tree with pipe cleaners and a styrofoam cone. With just a few simple steps, you'll have a unique holiday decoration in no time!

1 Use a 20 cm styrofoam cone as your base and paint it dark green with acrylic paint. Apply two coats for full coverage.

2 Take all the green pipe cleaners and half of the white pipe cleaners from the kit. Cut them into four equal pieces and fold each piece in half. The branches for your Christmas tree are now ready.

3 Starting at the bottom of the foam cone, glue the branches in place with a hot glue gun, letting them stick out slightly at the base. Complete each row before moving to the next layer.

4 After two rows of green branches, add a row of white branches.

5 Continue to the top, finishing with a final layer of white branches.

6 Gently bend all the branches outward.

7 Finally, decorate your tree with red and white pom-poms.
